

# RUNNING OFF THE BURGER

---

(name)

Write down you guess for the calorie count of each burger.

	<b>Quarter Pounder w/ Cheese</b>	<b>Double Quarter Pounder w/Cheese</b>	<b>Titanic Burger</b>	<b>The Beast</b>
Guess				
Actual				
Miles				

1. Calculate how many miles you need to run in order to burn off the calories you get from eating each of the burgers listed above. Put your answers in the row titled "Miles".

2. Write a function to calculate how many calories you burn running a mile.

3. How many calories will you burn running 5 miles?

4. FRIES WITH THAT? Write a function that calculates the amount of calories you consume if you eat a Quarter Pounder w/Cheese and french fries. The function should calculate it based on the number of french fries you eat.
